Public water system valves related to controlling the private fire service connection shall only be operated by District personnel. Coordinate all scheduling for activation or isolation with the District office at 575-8100.

NOTICE OF FINAL INSPECTION PRIOR TO SERVICE TRANSFERS

The District will require a final inspection of a water meter and related appurtenances upon completion of construction for all new or renovated buildings prior to transferring water service. This final inspection will occur after the building receives a Certificate of Occupancy from the appropriate jurisdiction, and would verify the District's meter, meter box, endpoint, antenna, and other equipment and related items were not damaged and remained properly installed during the construction phase of the building. This inspection will also verify the meter box is cleaned out and set to proper grade in accordance with District standards.

If damage or changes to the original installation are found upon inspection, the owner of the meter account will be held responsible for District costs associated with all repairs prior to transferring water service to a subsequent owner. The current owner will be notified of these damages or changes, and the cost of repairs or restoration will be included on their final bill. All charges on the owner account are required to be paid prior to transferring water service to a subsequent owner. Upon prior approval by the District, a properly licensed contractor may address these repairs or restoration under permit through the District office.
